Mariana Vangelov

An interactive digital portfolio that transforms my identity into a comprehensive website, perfect for showcasing my potential to employers, collaborators, and other types of professionals.

With Computer Science being such a competitive major, having a personal website is more than just a digital resume. This will serve as a one stop shop for sharing my personality, professional skills, and assets instead of just presenting boring words on a page like you see on a resume. This website will allow visitors to understand the range of my professional capabilities, academic achievements, and personal trajectory.
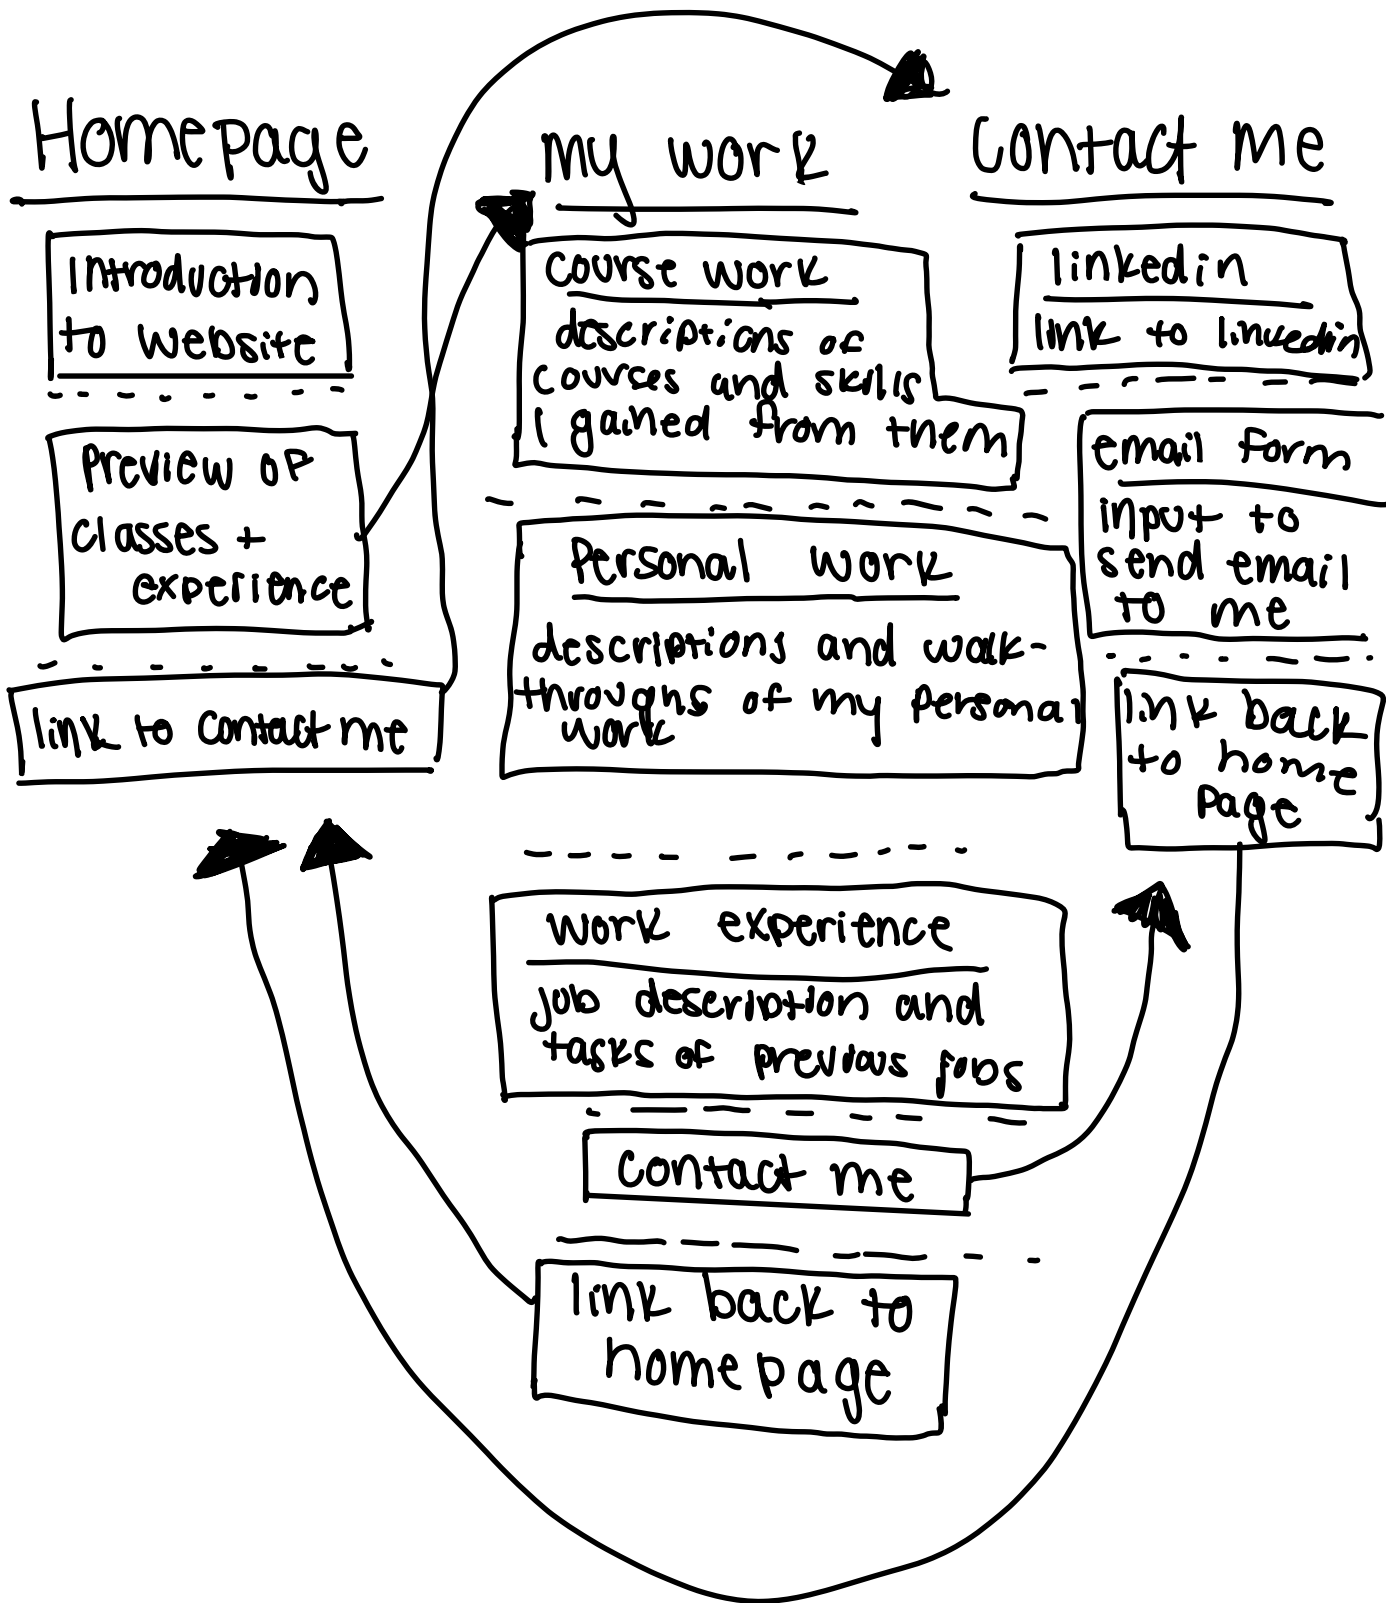

The site will combine my work experience, academic coursework, and personal projects so that potential employers, recruiters, and professional connections can quickly understand what I bring to the table.

Personas
1) Future employer
2) A potential collaborator

Comps
1) https://braydenfriesen.com/
2) https://wongmjane.com/

Home   Portfolio   Contact Me

I was born and raised in Michigan, growing up in the small town of South Lyon. From a young age, I discovered my love for creating—whether it was building Legos or programming robots with my dad. These early experiences laid the foundation for my passion in technology and problem-solving, eventually bringing me to Michigan State University to study Computer Science.

In my free time, I enjoy exploring emerging tech trends and designing projects that blend aesthetics with practicality. Whether it's crafting responsive web designs or engineering complex systems, I thrive on opportunities that push the boundaries of my technical and creative abilities.
